TOBAGO

This Tobago leather is an aniline finished leather that retains its purely natural appearance due to its finish and natural grain. The specific effect is obtained by finishing this leather with paraffine, oil and aniline. During the production process color and grain deviations may arise due to the skin structure of the leather. In use it creates a dry velvety look, which gives the leather its character.

Day-to-day maintenance

Use a soft cloth to dust the upholstery.

Important advice

We advise to first vacuum your new furniture to remove dust from production and transport, using the specific furniture part or dust it. If you don't prefer the dry velvety look, you can use a thin layer of lotion to protect the leather, for example Keralux S from LCK, or a lotion that is suitable for smooth leather with a wax/and or oil finish (saddle). In order for the leather to retain its attractiveness, its wonderful soft grip and its naturalness, we advise this nurturing treatment twice a year, or depending on the look you prefer.

TRINIDAD

Trinidad is a pure aniline leather with a wax finish and natural grain that allows it to retain its pure, natural appearance. This type of leathers undergoes a second, vegetable-based, tanning process with a transparent finish. The aniline finish brings out pronounced colour variations in the skin, and gives the skin an open aspect. Thanks to the difference in grain structures, the pigments can penetrate into the hide in various ways, by which the wonderful and attractive colour deviations are achieved.

Day-to-day maintenance

Use a soft cloth to dust the upholstery.

Do not treat Trinidad with a nubuck brush because then the color shades will be scrubbed away.

CHARACTERISTICS

The fabrics in the Montis collection are care-fully chosen and specially woven and dyed for us so that they form a unique combination with all types of Montis leather. All fabrics are tested for characteristics such as colour fastness and wear-resistance, which are characteristics that determine the quality of the fabric.

MAINTENANCE

Never put the furniture in direct sunlight as this can discolour the fabrics.

- Take care that shoe buckles, belts and household pets do not snag the upholstery. However, if this does happen, snip off the thread that has been pulled out (this does as little damage as possible to the upholstery).
- Fabrics can be vacuumed. However, vacuuming a cushion can damage the stuffing. It is therefore best to shake cushions or remove covers before vacuuming them.
- Dark-wash clothing, such as denim, may stain the upholstery. Please be careful when wearing this kind of clothing

IMPORTANT

Chenille

When chenille yarns are incorporated into a fabric, this gives a rich, full look. With new chenille fabrics, the cut poles will stand almost upright and absorb a lot of light. We see a beautiful, full shade. The influence of body weight, moisture and humidity can cause the material to lie flat in a different direction. Depending on the quantity, the raw material and the length of the hairs, this will alter the appearance of the fabric. It is an optical effect that can in no way be associated with less good properties of the materials used in the fabric.

User advise

It is recommended NOT to clean with water.

Low power vacuuming with the brush attachment and gentle brushing is permitted.
